

PAIN MEDICINES AFTER SURGERY

It is our goal to help our patients get through their recovery from surgery as easily and with as little pain as possible.

Sometimes, more than one pain medicine can be taken at a time.

You must be careful about the amount of **TYLENOL** (Acetaminophin) taken in 24 hours.

****LORTAB- Has Tylenol + Hydrocodone**

****TYLOX- Has Tylenol + Oxycodone**

These two should not be taken in the same 4 hour period or you could get too much Tylenol. Do not take plain Tylenol with either of these.

****MEPERGAN FORTIS-Has Demerol + Phenergan** and can be taken with Lortab or Tylox if either of those two do not relieve the pain.
